[Tom's Hardware Guide Team]Q: Can you target and then 'add' an item to an ItemsControl in WPF? I have an ItemsControl and need to use an object that was created outside of the scope of the page. The user clicks an item in the ItemsControl and the item is a call to a service, and creates an object. I need to give that object to the items control so it can be displayed. I cannot control how the object is created or how it is placed into the ItemsControl. It is another project and I have no control over it. What is the best way to place an item into an ItemsControl? A: You could add it to your ItemSource collection
ItemControl.ItemSource.Add(myObject); Or if your object implements the INotifyPropertyChanged interface, you could raise the PropertyChanged event to let the control know the item has changed and update it myObject.PropertyChanged += (sender, e) => ItemControl.ItemSource.Add(myObject); [Preparation and identification of thiolated chitosan]. To develop a new material for gene therapy. Chitosan was modified by thioglycolic acid and then cross-linked with glutaraldehyde. The prepared thiolated chitosan (CS-T) was characterized by FTIR, XRD, elemental analysis and morphological observations. CS-T was capable of protecting plasmid DNA from the degradations caused by DNase, S1 nuclease and protease. CS- 82157476af
