[Latex For Mac Os X Lion](#)

The image shows a screenshot of the Peppermint IDE. The window title is "Peppermint". The editor is split into two panes. The left pane shows the source code for a CoffeeScript file named "Peppermint". The code defines two classes, Snake and Horse, both extending an Animal class. The Snake class has a move method that alerts "Slithering..." and calls super with 5. The Horse class has a move method that alerts "Gallopig..." and calls super with 45. The code also creates instances of Snake and Horse and calls the move method on the Snake instance.

```
1 class Snake extends Animal
2   move: ->
3     alert "Slithering..."
4     super 5
5
6 class Horse extends Animal
7   move: ->
8     alert "Gallopig..."
9     super 45
10
11 sam = new Snake "Sammy the Python"
12 tom = new Horse "Tommy the Palomino"
13
14 sam.move()
```

The right pane shows the live preview of the code, which is JavaScript. It shows the compiled code for the Snake and Horse classes, including the constructor functions and the move methods. The code is as follows:

```
10   return Snake.__super__.constructor.apply(
11   }
12
13 Snake.prototype.move = function() {
14   alert("Slithering...");
15   return Snake.__super__.move.call(this, 5)
16 };
17
18   return Snake;
19
20 })(Animal);
21
22 Horse = (function(_super) {
23   __extends(Horse, _super);
24
25   function Horse() {
26     return Horse.__super__.constructor.apply(
27     }
28
29   Horse.prototype.move = function() {
30     alert("Gallopig...");
31     return Horse.__super__.move.call(this, 45
32   });
```

The bottom status bar shows "Line 8, Column 25" and "CoffeeScript".
